

BREAKTHROUGH

Testing power supplies. In a busy production environment throughput is critical. Now, thanks to a revolutionary new test methodology, you can make significant productivity improvements in your test process.

Intepro 9000 is the next generation power supply test system from Intepro. It is fast and accurate, and will cut your test times and your costs dramatically.

Intepro 9000 turns power supply testing on its head. Tedious repetitive measurements are replaced by a single stored value. Settling times are reduced to their theoretical limit and one single multi-function module performs all commonly required measurements.

As a result, test times are reduced by more than 50% in most applications and up to 90% in some.

It's a real breakthrough!
