

**No compromise**

**FRONT-LINE RELIABILITY FOR  
POWER ELECTRONICS ATE**

**SCHAFFNER**

safety for electronic systems

**When it comes to electrical test of military hardware, Schaffner is what you might call a 'world superpower'.**

Our customers include leading players in the defence and avionics industries. Our test solutions guarantee reliability of power electronics in flight control, radar and navigation systems – to name just a few.

We are focussed on functional test, environmental test, diagnostics and repair, for high-end power electronics and electrical test, using Atlas, VXI, PXI, IEEE 1553 and ARINC based technologies. We have a range of high quality standard solutions and an outstanding capability for design and build of custom systems.

We create effective partnerships, working closely with our customers to achieve technical and time-line objectives. Regular reporting, transparent communication and a dedicated project manager protect your interests at every stage from concept to completion.

We don't believe in compromise. Not in the quality of the systems we supply, nor in the service we provide in support of your project goals. It is because we are not afraid to tackle the trickiest of test challenges that you can be sure our test solutions won't compromise your designs.
